

# NEOWARE THIN CLIENTS OPERATING SYSTEMS—WINDOWS® XPe

ROBUST. EXPANDABLE. CUSTOMIZABLE.

Neoware provides the most open, industry standard operating systems available for thin clients—allowing you to protect your investments in technology while minimizing the effects of obsolescence. Using our unique, cross-platform thin client software, enterprises can upgrade devices without changing software, and can upgrade to other operating systems without changing thin clients.

## ROBUST

Experience the traditional Windows interface without the need to retrain end users or administrators. Microsoft Windows XPe delivers the power of Windows XP Professional in a modular form, and its compatibility with Windows 32-bit technology provides superior performance. Easily integrated into your environment with a full set of features plus a full, local version of Microsoft's Internet Explorer browser, your end users may not even realize their Neoware thin client is not a PC!

## EXPANDABLE

Add peripherals and drivers without hesitation. A vast array of plug-and-play and other drivers for the most comprehensive peripheral support are readily available. Your Neoware Windows XPe thin client comes standard with a full Internet Explorer browser that supports plug-ins, COM objects, Java, Adobe Acrobat, Macromedia Flash and ActiveX. Neoware thin clients with Windows XPe can be expanded in the future to meet changing business needs.

## CUSTOMIZABLE

Create your own applications and load them locally onto a Windows XPe device. You'll be amazed at how easy it is to personalize your thin clients. Windows XPe is not only highly customizable, it offers the most up-to-date thin client connectivity to Windows, mainframes, feature-rich Web applications, and enhanced security: all in a standard Windows Graphical User Interface (GUI).

## STREAM SOFTWARE ON-DEMAND TO PCs AND THIN CLIENTS

Neoware thin clients with Windows XPe are available with Neoware Image Manager as an option, providing the ability to stream operating systems and applications on demand. This gives you all the benefits of thin clients with all the usability and performance of PCs.

## AMAZING NEW CAPABILITIES FOR THIN CLIENTS

Don't be limited by your thin client. You can run a robust image of Windows XPe on a thin client without the limits imposed by flash size – a major advantage that further extends the useful life of

thin clients. With Neoware Image Manager, thin clients can also be run flashless, which significantly reduces the costs.

## DUAL HEAD VIDEO

Do you need to support more than one monitor per desktop? Not a problem. Neoware thin clients with Windows XPe include a dual head video option for a wider viewing screen, or for running multiple applications.

## OPEN, STANDARDS-BASED TECHNOLOGY

Utilizing open, industry-standard protocols rather than proprietary,

home-grown solutions enables Neoware to provide quicker access to the latest technologies from Microsoft, Citrix and other industry leading software providers. As a result, you'll always have access to the latest technology, and won't be locked in to a proprietary solution. That protects your investment in thin client computing technology from Neoware over the long term.

## NEOWARE-CLASS SECURITY

Neoware thin clients with Windows XPe include unique, Neoware-developed enhanced security, which delivers rock-solid performance and reliability in enterprise environments. Neoware security includes a read-only file system that virtually eliminates standard PC viruses and the risks of associated data loss and system downtime. Neoware XPe includes the Neoware Security Center, which provides a bi-directional firewall and the patent-pending Neoware Open AntiVirus, which allows you to use the same Antivirus solution that you use on your PCs.

## OPEN, NO-TOUCH MANAGEMENT

Open Management gives you choice, flexibility and lower costs. Every Neoware thin client comes bundled with Neoware Remote Manager, a powerful thin client management tool with a friendly, easy to use graphical user interface. Neoware Remote Manager lets you manage all your desktops – without touching them! Discover, configure, shadow, clone, update and upgrade your thin clients without visiting the desktop. Not only can your Neoware thin clients be managed by Neoware Remote Manager, we also provide software to support IBM Tivoli, Microsoft SMS and Altiris, giving you greater flexibility and the option of using a single management tool to manage both your PCs and thin clients.

NEOWARE. WOULDN'T IT BE GREAT?
